

Fiber Optic Patch Cables

DHD fiber optic patch cables are the ideal solution for interconnects within a structured cabling system, network & server environments, and test & measurement applications. They are designed, manufactured, and tested in compliance with Telcordia, ANSI/TIA, and IEC industry standards.

DHD's optic cabling line is made with 100% Corning glass and tested using Fluke, Exfo, and Interferometer testers. All cables are serialized and test reports are included in every bag.
